**Subject: Groundwater Monitoring at Sandia National Laboratories/New Mexico
Conducted by NMED/DOE OB for Monitoring Well CYN-MW6, FFY 2008
Q-4, February 18, 2009**

Dear Ms. Agogino:

This letter transmits the subject final report.

If you have any questions, or if you would like copies of the complete data set, please contact Chris Armijo at (505)845-5824 or contact me at (505)845-5933.

Sincerely,

Barry S. Birch, CHMM
Program Manager
Sandia Oversight Section

**Groundwater Monitoring at Sandia National Laboratories/New Mexico
Conducted by NMED/DOE OB for Monitoring Well CYN-MW6, FFY 2008 Q-4
February 18, 2009**

The New Mexico Environment Department (NMED) DOE Oversight Bureau (Bureau) has compiled and assessed groundwater data collected on September 17, 2008 from Lurance Canyon Burn Site Monitoring well CYN-MW6. Samples were submitted to an independent analytical laboratory for metals, radionuclide isotopes, inorganic, and organic analyses.

Data Assessment

Data results are compared to applicable Maximum Allowable Concentrations (MAC) from the New Mexico Water Quality Control Commission (WQCC) (20.6.2.3103 NMAC Human Health Standards) and Maximum Contaminant Levels (MCLs) from the EPA National Primary Drinking Water Regulations (40 CFR 141).

Total (unfiltered) Target Analyte List (TAL) metals are listed in Table-1. All metal concentrations were below established regulatory standards.

Analytical results for radionuclide isotopes are listed in Table-2. Samples were analyzed for gross alpha/beta and gamma-emitting isotopes. All radionuclide activities were below MCLs, where established.

Analytical results for inorganic compounds are listed in Table-3. Samples were analyzed for anions, cations, nitrate plus nitrite (NPN) measured as nitrogen, and perchlorate. All anion and cation concentrations were below established MCLs. The nitrate concentration of 51 mg/L exceeded the MCL of 10 mg/L. Perchlorate was analyzed using EPA method 314.0. Perchlorate was detected above the SNL Compliance Order On Consent screening level of 0.004 mg/L set by NMED. The CYN-MW6 had a concentration of 0.0087 mg/L.

Analytical results for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), diesel range organics (DRO), and gasoline range organics (GRO) are listed in Table-4. No VOCs, SVOCS, or GRO were detected above the method detection limits (MDLs). The DRO concentration was detected above the MDL, but it was flagged with a "J" and a "B" indicating the concentration was estimated and also detected in the associated method blank.

Conclusions

Nitrate concentration exceeded the MCL of 10 mg/L by 5 times at monitoring well CYN-MW6. Concentrations have consistently exceeded the MCL over the life of the well. Trending data indicate the nitrate concentration has been increasing. The Oversight Bureau recommends that Sandia continues monitoring CYN-MW6 for NPN. Perchlorate concentrations at CYN-MW6 have consistently exceeded the NMED screening level of .004 mg/L and have been stable to slightly increasing over time.

Response

Questions or comments should be addressed to Barry S. Birch by phone at (505)845-5933, by e-mail at barry.birch@state.nm.us, or to the address in the letterhead.
